

VICTORINOX

VENTURE COLLECTION

ROBUST RELIABILITY: FOUND

Introducing the ultimate outdoors adventure blades. Meet our Venture collection: an expertly engineered range of fixed-blade knives with bushcraft in their DNA. Made from high-quality steel renowned for its exceptional durability, this is rock-solid reliability that adeptly conquers any open-air challenge. From hiking and camping to bush survival, it's all taken care of.

- Pro engineered for bushcraft and the outdoors
- Swiss made fixed-blade knives
- Constructed from high-quality steel

VENTURE COLLECTION BACKGROUND STORY

Venture Collection: The Background Story

This fixed-blade knife collection is the ultimate in practical adventure gear. Born out of a passion for exploration, survival and resilience, Venture delivers high-quality and solid reliability to the most intrepid of outdoor adventurers. Developed and designed by experts in Switzerland with intricate bushcraft tasks as inspiration, this is a pro-level collection. It sets a new standard in well-designed knives that deliver standout functionality. Fixed-blade knives are popular among bushcraft fans. They can be used for a variety of tasks spanning carving, cutting, food preparation and camp building. Fixed-blade knives are renowned for their durability and reliability. This collection marks a pivotal moment for Victorinox, as it's the first time we will produce fixed-blade outdoor knives in-house. Quality is paramount in fixed blades, and this collection sets a new benchmark in design, functionality and durability.

ADDITIONAL PRODUCT INFORMATION

It's All in the Details

Blade

Expertly crafted from a trusted steel alloy, 14C28N stainless steel with a 59 HRC level. These are blades that have a full tang construction, are inherently resilient and maintain excellent edge retention. The drop point blade delivers a fine tip for precise carving tasks. Yet this fine tip still maintains enough strength to perform moderate leveraging tasks. The sharp 90° spine allows for easy fire ignition when it's used in conjunction with the fire steel and scrape tinder. Front jimping allows maximum control of precision cuts.

The proven flat grind geometry excels in many areas, delivering...

- Outstanding performance for carving and whittling
- Solid reliability for camping, hiking and outdoor tasks
- Easy-to-sharpen credentials when in the outdoors
- Excellent slicing capability in the outdoor "kitchen"

Handle

The "Powerzone" design (profiled lines show the zones where the strongest force can be applied) and the microstructure and shape of the ergonomic handle provide a comfortable and safe grip for all weather conditions. Crafted in polymer (TPE), the handle is also extremely durable. The specially designed thumb rest offers comfort and control when using specialized carving techniques like the sternum pull cut, pinch-grip or power cut.

VENTURE COLLECTION

ADDITIONAL PRODUCT INFORMATION

Protruding Tang

The protruding tang features a sharpened, 90° edge for easy scraping (wood), smashing (nuts and seeds), hammering and crushing.

A hex hole can accommodate the flat drill provided in the Venture Pro Kit. It can additionally be used as a lanyard hole for increased safety and comfort when chopping wood.

Sheath

The sheath protects and stores the knife. It is symmetrical, so the blade can be inserted either way and it works equally well for both right- and left-handed consumers. Drainage holes in the sheath allow the knife blade to dry out after use. Mounting the sheath on the blade makes an extension for drilling. In addition to all this, the sheath can also be used as an effective blowtube for fire making.

Belt Carry Loop

Made from a sturdy webbing (PP), it can be carried on either a belt or Molle system. An integrated elastic ring quickly and easily secures the knife.

VENTURE COLLECTION FUNCTIONS

Venture

3.0902 (red)
3.0902.3 (black)
3.0902.4 (olive)

1. Blade 10.5 cm
2. Protruding tang with
3. – Hex hole
4. – Lanyard hole
5. Fire making blowtube

With sheath, belt carry loop,
